

## VJD-VOCS-1D Decoder VOCS license for 1 display

### VIDEOJET decoder

The VJD-VOCS-1D license offers advanced functionality which captures the exact content displayed on a monitor, including all operator interactions. This content is streamed via RTSP to VIDEOJET decoder 7000, allowing for seamless integration into existing recording workflows. By creating a detailed audit trail of the operator's view and actions, the license enhances transparency, accountability, and compliance in surveillance operations. Each connected monitor requires its own license, allowing for flexible and scalable deployment across control rooms and monitoring environments.
