

COMMUNICATOR FOR ELECTRIC FENCE ENERGIZER

WIFI LITE

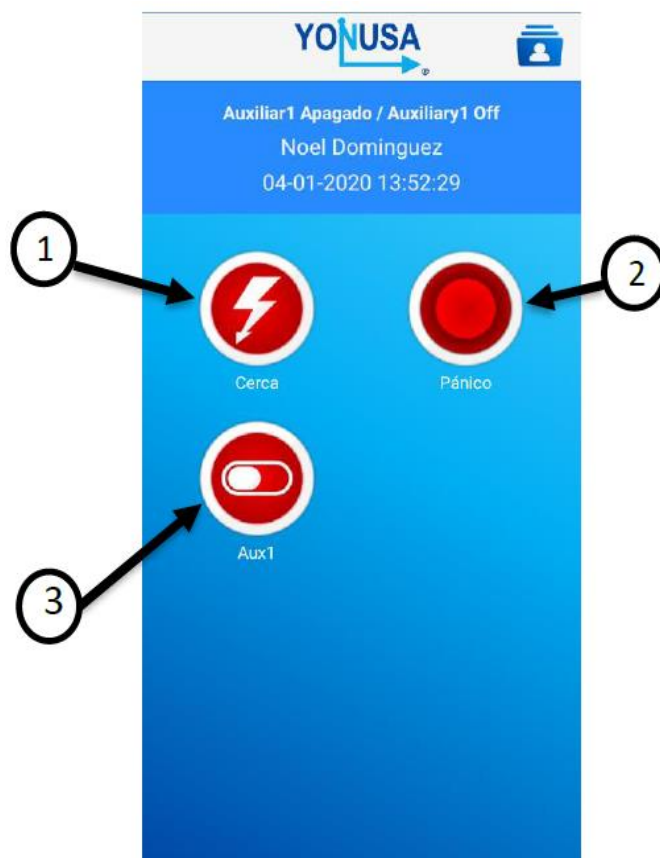

WIFI COMMUNICATOR FOR ELECTRIC FENCE ENERGIZER

Device designed to control the ON/OFF status of an electric fence energizer, control an alarm signal for panic situations, and turn ON or OFF an external connected device.

When this device is connected to any Yonusa® electric fence energizer, it sends alerts generated by the electric fence to your mobile phone in real time, thanks to its integration with the Yonusa 2.0® mobile app.

At the installation site, you only need a Wi-Fi network with an Internet connection to access the following controls and notifications:

1. Control the electric fence ON/OFF status from the Yonusa 2.0 app, with a notification whenever its status changes.
2. Control the alarm signal ON/OFF status. If an alarm siren is connected to the energizer, it will turn on when this button is pressed in the Yonusa 2.0 app. A notification is also sent when the alarm is activated due to an intrusion on the fence.
3. Control a general-purpose relay ON/OFF, used for lighting, access control, or another device.

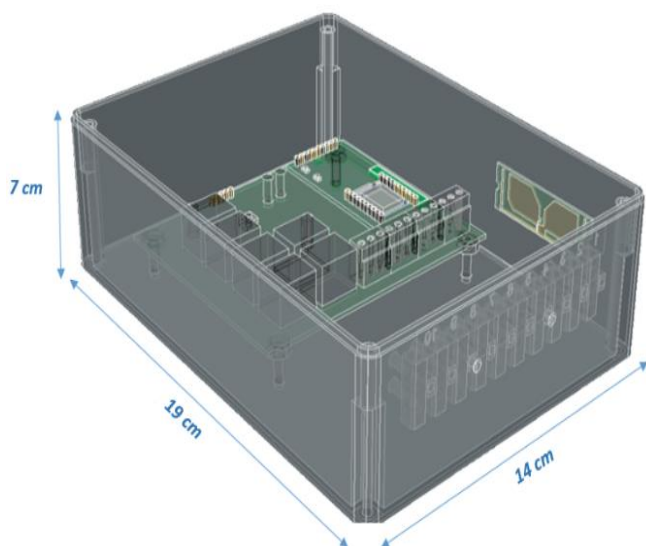

COMMUNICATOR FOR ELECTRIC FENCE ENERGIZER

WIFI LITE

TECHNICAL SPECIFICATIONS:

- Wi-Fi connection range: 8 meters without obstacles.
- Wi-Fi standard: 805.11 b/g n
- Communication frequency: 2.4 GHz
- Data transfer rate: 130 Mbit/s
- Compatible with Yonusa 2.0® App, available on iOS and Android
- General-purpose relay
- Relay capacity: 120 Vac 10 Amp
- Power supply: 12 Vdc 1 Amp
- Dimensions: 14 x 19 x 7 cm
