MCDI SECURITHOR STL-50

Technical specifications | Alarm monitoring and response software

Manufacturer	MCDI Security Products
Model / license	STL-50
TVC Key	MCD2550002
Capacity of this version	License for 50 accounts
Module included in the commercial package	CAM (video management and integration; confirm exact scope of license) with the distributor
Product type	Software license; not an alarm panel or physical receiver
Warranty published by TVC	3 months

Overview

SECURITHOR is a software platform designed for receiving, managing, and responding to alarm events at monitoring stations, security centers, and operations that oversee company-owned or third-party facilities. The STL-50 version, marketed under code MCD2550002, is identified by TVC as a license for 50 accounts with a CAM module.

Main features of the platform

• **Signal management:**Reception and processing of events from compatible receivers, servers, and devices.

• **Account management:**organization of monitored sites, contact information, groupings, and access permissions.

• **Event management:**tools for operators to manage alarms, document interventions and consult the history.

• **Multi-operator operation:**SECURITHOR functions and editions allow you to adapt the operation to different workflows; confirm the range of stations included in STL-50.

• **Integration:**MCDI publishes compatibility and integrations with numerous manufacturers and formats; specific compatibility depends on the receiver, protocol, version, and licensed modules.

CAM module – video management

MCDI documentation describes the CAM module for integrating compatible IP cameras/NVRs, including Hikvision, Dahua, and EPCOM. Features described for CAM include automatic video triggering in response to an event/pre-alarm, video recording, and evidence review. Available features may vary depending on the module generation, equipment integration, and purchased license.

License note: The MCDI catalog differentiates STL (CAM/CAM Premium as options) from other editions. SKU MCD2550002 is commercially released as STL-50 with a CAM module. Before quoting or installing, verify in writing that the CAM module is activated in the provided license and what specific integrations it covers.

Architecture and integration

Element	Description
Software	SECURITHOR STL-50 installed on a compatible computer.
Signal input	Through a compatible receiver or interface; it should not be assumed that the software directly receives any communicator.

Element	Description
Example of a receiver	MCDI DT42: MCDI documents output to automation software such as SECURITHOR via serial, USB, or IP connection.
DSC/M2M Integration	The MCDI catalog includes DSC Connect–M2M among the systems/protocols supported for DT42 receivers. Confirm receiver model, configuration, and version before guaranteeing compatibility.

Installation requirements and considerations

• For test operation, the MCDI catalog in Spanish mentions the following as a reference: Intel Core i3 processor, 16 GB of RAM, dedicated video card, and 50 GB of disk space. This should not be taken as final sizing for production.

• The operating system and production requirements must be validated with MCDI according to signal volume, number of operators, active modules and site architecture.

The documentation consulted mentions Windows 10 Pro 64-bit for the interface and .NET Framework 4.6.2; requirements may change with newer versions. Confirm the current requirements before installing.

• For a center with high event traffic, multiple operators or video, request specific sizing from the manufacturer.

Commercial data and observations

TVC lists the product as MCDI SECURITHOR STL-50, product code MCD2550002, a license for 50 accounts with a CAM module and a 3-month warranty. The product information also states that there are no refunds for digital licensing products once processed. Availability and delivery times are subject to commercial confirmation.

Important: This document is an information sheet prepared in Spanish using publicly available information from the manufacturer and the TVC product data sheet. It does not replace the official datasheet nor does it guarantee universal compatibility. Features, requirements, and modules may change; verify the exact license version and content before implementation.
