TECHNICAL DATA SHEET

SECURITHOR CORE ST1V2

Core alarm response and management software | Single workstation

PRODUCT IDENTIFICATION

Manufacturer	MCDI Security Products
Model	ST1V2
TVC SKU	MCD2550012
Type	Core software license
Operation	One workstation / one concurrent session
SAT code	43231511

OVERVIEW

SECURITHOR Core ST1V2 is a single-workstation edition used to manage subscriber accounts, receive and handle alarm events, and document the operations of an alarm receiving center or corporate security department.

CORE CAPABILITIES

Alarm handling	Process and track events, with procedures configurable by account, partition and alarm code.
Account management	No software-imposed logical limit on accounts or partitions; subscriber data and account grouping.
Reports and audit	Reports, statistics, event-linked operator comments and operator action audit trail.
Notifications	Email and SMS delivery engine; external services/gateways and setup are required.
Basic video access	Compatible Hikvision/Dahua viewers and video links; advanced video verification needs optional modules.

REFERENCE SYSTEM REQUIREMENTS

Processor	Recent i3/i5/i7-class CPU sized for workload
Memory	16 GB RAM or more per MCDI current guidance
Storage	NVMe/M.2 SSD recommended; 10 GB for initial installation, 128 GB or more suggested depending on usage
Operating system	Windows 10/11 Pro; confirm exact supported builds with MCDI
Database	PostgreSQL; no separate commercial SQL database license

LICENSING AND SUPPORT

License	Perpetual core license, one workstation and one active session
Support	TVC lists an initial 12 months of support/updates; optional renewal
TVC warranty	12 months per commercial listing

SCOPE AND IMPORTANT NOTES

- No logical account limit does not mean unlimited hardware capacity. MCDI identifies typical ST1 v2 deployments below 2,000 accounts and asks customers to consult MCDI for larger systems.
- CAM Ultra, MVP, MCB, Live Backup, WebOperator and other capabilities can require separately purchased modules or services.
- Migration to the Network Edition is available as a separate upgrade; ST1V2 alone does not provide multiple simultaneous operators.
