✓Suggestion: Make sure to carefully check your order before finalizing your purchase.

AVAILABILITY: 5 to 6 business days (from the date the order is paid and/or authorized with credit)

SECURITHO

An advanced solution for managing alarms, IoT devices, and video surveillance systems, ideal for Alarm Monitoring Centers or Corporate Security Departments. This software combines over 30 years of MCDI experience with cutting-edge technology to provide a robust, efficient, and future-proof platform.

Main Features

- Compatibility with over 400 brands of IoT devices, cameras, and panels alarm.
- Video Visit: Scheduled monitoring according to configured schedules.
- Configurable operating procedures by account, partition, and alarm code.

Web Operator

View real-time events from anywhere.

View alarm history, accounts and contacts without needing to be at the main station.

Camera viewing and video verification when integrated with CAMULTRA.

View account, zone, user, and statistics information directly from your browser.

Remote control of panels: arming, disarming and activation of relays according to compatible products.

WebOp1 allows one user to connect at a time via the web, and web viewing channels can be added to enable multi-user operation, with multiple operators viewing traffic or account information without using the monitoring center server or a Securithor workstation.

Specs

It is installed as a complementary module on the Securithor server, enabling a secure web portal.

You can use an HTTPS page to encrypt communications and protect access.

It allows you to create user profiles with differentiated permissions for operators, supervisors, or corporate clients.

Compatible with other modules such as CAMULTRA, MCB and MVP, allowing you to process alarms, view maps and dispatch personnel from the web.

Requirements and license

It is an optional module of Securithor; an active support plan is recommended.

Compatible with modern browsers and accessible on both PC and tablet

Additional Modules to Enhance SECURITHOR

CAM Ultra (Video Verification):

- Direct connection to multiple brands of cameras and panels.
- Quick alarm verification with images and videos.
- Integration with Ajax MotionCam and Dahua Airshield.

Mission Control Board (MCB):

- Real-time tracking and dispatch of personnel.
- Generation of detailed itineraries and reports.

MVP Map View and Plans:

- Interactive maps with real-time alerts.
- Access to site plans for more efficient visual management.

Webopch1:

- Securithor web interface module for on-site verification and correction of installations.

PUSH1:

- Event notifications sent directly to a customer's mobile application.

STSLBU (Live Back-Up):

- Live backup to ensure operational continuity.
- Automatic switchover to the backup server in case of failure.
- Databases updated in real time for fast recovery.

Click to Dial:

- Quick calls from the Securithor interface with a single click.
- Recording of calls linked to events in MP3 format.
- Customized procedures by account and alarm type, ensuring communication

efficient and error-free.

M2M2W:

- Arm and disarm alarm panels or communicators directly from SECURITHOR.
- Compatible with Ajax, Dahua, Hikvision, Netio, M2M, EBS, and many other brands.
