Module OPS Windows

User guide

Module OPS Version 1.0

ZK-OPS Series

ZK-OPS (Open Pluggable Specification) is a smart display accessory, with a built-in Windows system. The OPS can be installed directly on the back of the interactive digital display, greatly improving the function and performance of the device.

Note: When inserting or removing the module, the power cord of the machine must be pulled out

1.1 OPS module placement

1.2 As you can see in the image, we have on the back of our screen, on the right side we will see a plate with two screws, we just have to remove them to release the OPS module bay

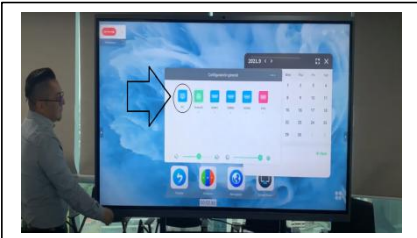

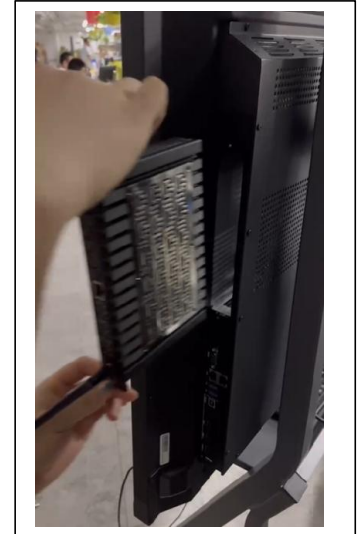

Note: It is not recommended to leave the module bay uncovered.

Module OPS Windows

1.3 We proceed to introduce the OPS module in an easy and simple way. We only have to tighten the screws of the same module. This installation is very simple and only enters on one side

Note: When inserting or removing the OPS module, the power cord of the machine must be pulled out.

2.1 To access the OPS module

2.2 In the Input options, the detected module option will now appear and you can find it as a PC icon

2.3 Once we make contact with the PC icon, the screen will go to Windows mode.

2.4 To return to the Android system we just have to press the Home icon on the touch panel of the same screen and that's it.
